Application No.: 10/698,148
Filing Date: October 31, 2003

LISTING OF THE CLAIMS

- 1-42. (Cancelled)
- (Previously Presented) A method of treating a patient, comprising the steps of: providing a gastrointestinal sleeve, having a proximal end, a distal end, and a lumen extending therethrough;

transesophageally advancing the sleeve to position the proximal end adjacent an attachment site near the gastroesophageal junction;

advancing the distal end through the stomach and into the intestine; and

attaching the proximal end at the attachment site without creating a serosal to serosal bond, such that the sleeve is configured to deliver food from the esophagus directly into the intestine;

wherein the attaching the proximal end step comprises using at least one tissue anchor having a proximal end and a distal end, the distal end of the tissue anchor configured to have a transversely reduced configuration for passing transmurally through the attachment site and a transversely enlarged configuration after passing transmurally through the attachment site, wherein the distal end of the tissue anchor includes a proximally facing surface which rests against a serosal surface to retain the sleeve.

- 44. (Previously Presented) A method of treating a patient as in Claim 43, further comprising the additional step of implanting a support at the site, for linking the proximal end of the sleeve to the site.
- 45. (Previously Presented) A method of treating a patient as in Claim 44, wherein the support is implanted in the same procedure as the sleeve.
- 46. (Previously Presented) A method of treating a patient as in Claim 44, wherein the support is implanted in a first procedure and the sleeve is attached to the support in a second procedure.
- 47. (Previously Presented) A method of treating a patient as in Claim 43, wherein the advancing the distal end step comprises advancing the distal end at least as far as the ligament of Treitz.
- 48. (Previously Presented) A method of treating a patient as in Claim 43, wherein the advancing the distal end step comprises advancing the distall end distally of the duodenum.

Application No.: 10/698,148 Filing Date: October 31, 2003

49. (Previously Presented) A method of treating a patient as in Claim 43, wherein the advancing the distal end step comprises advancing the distal end into the jejunum.

- 50. (Previously Presented) A method of treating a patient as in Claim 43, wherein the attaching the proximal end step comprises using a suture.
 - (Cancelled)
- 52. (Previously Presented) A method of treating a patient as in Claim 43, wherein the tissue anchor comprises a "T" tag.
 - 53. (Cancelled)
- (Previously Presented) A method of treating a patient as in Claim 44, wherein the support comprises a tubular cuff.
- 55. (Previously Presented) A method of treating a patient as in Claim 54, comprising attaching the cuff at the site with at least one transmural anchor.
- 56 (Previously Presented) A method of treating a patient as in Claim 43, wherein the sleeve is at least about 50 cm in length.
- 57. (Previously Presented) A method of treating a patient as in Claim 43, wherein the sleeve is at least about 75 cm in length.
- 58. (Previously Presented) A method of treating a patient as in Claim 43, wherein the sleeve is at least about 125 cm in length.
- 59. (Previously Presented) A method of treating a patient as in Claim 56, wherein the sleeve is sufficiently flexible that material traveling through the sleeve is influenced by the natural operation of the pylorus.
- (Previously Presented) A method of treating a patient as in Claim 54, wherein the sleeve is removably attached to the cuff.
- (Previously Presented) A method of treating a patient as in Claim 54, wherein the sleeve is permanently attached to the cuff.
- (Withdrawn) A method of treating a patient as in Claim 43, wherein the advancing the distal end step comprises everting the sleeve.
- (Withdrawn) A method of treating a patient as in Claim 43, comprising advancing an introducer through the patient's pylorus.

Application No.: 10/698,148 Filing Date: October 31, 2003

 (Withdrawn) A method of treating a patient as in Claim 63, comprising everting the sleeve from the introducer into the intestine.

- (Withdrawn) A method of treating a patient as in Claim 43, wherein the method is accomplished using a purely peroral approach.
- 66. (Withdrawn) A method of treating a patient as in Claim 43, wherein the method is accomplished using a peroral approach assisted by a laparoscopic approach.
- 67. (Withdrawn) A method of treating a patient as in Claim 54, wherein the advancing the distal end step comprises everting the sleeve.
- 68. (Withdrawn) A method of treating a patient as in Claim 54, comprising advancing an introducer through the patient's pylorus.
- (Withdrawn) A method of treating a patient as in Claim 68, comprising everting the sleeve from the introducer into the intestine.
- (Withdrawn) A method of treating a patient as in Claim 54, wherein the method is accomplished using a purely peroral approach.
- 71. (Withdrawn) A method of treating a patient as in Claim 54, wherein the method is accomplished using a peroral approach assisted by a laparoscopic approach.
- 72. (Previously Presented) A method of treating a patient as in Claim 43, wherein the transversely enlarged configuration is achieved by expanding the anchor after passing through the serosal tissue.
- 73. (Previously Presented) A method of treating a patient as in Claim 43, wherein the transversely enlarged configuration is achieved by flexing a portion of the anchor after passing through the serosal tissue.
- 74. (Withdrawn) A method of treating a patient as in Claim 43, further comprising the step of visualizing the passage of ingested radiopaque material through the sleeve.
- 75. (Withdrawn) A method of treating a patient as in Claim 43, further comprising the step of applying antegrade tension on the sleeve by coupling the sleeve to peristaltic motion.
